

COMPREHENSIVE IMAGE MANAGEMENT

Corista delivers an integrated platform for Digital Pathology

The DP3 image management system provides a comprehensive suite of capabilities for in-house and collaborative clinical, educational, and research needs.

Corista provides a new level of interoperability for pathology, integrating WSI image scanning systems, image analytics and LIS/EHR platforms with a rich collaborative environment for clinicians, biotech, and pharmaceutical scientists.

DP3, the platform of choice for major medical organizations, leads the industry with fast, reliable, and ubiquitous access to the essential components of today's digital pathology, including:

- The industry standard in digital collaboration and

consultation, Corista software is agnostic to image format, providing the most adaptability in the field.

- Direct integration of the most popular quantitative image analytics systems.
- Tools to anonymize, index, and manage images and cases for education and research.
- A more complete way to manage cases of interest for teaching and clinical reference.

DP3 provides a more efficient and collaborative environment that can securely scale from single locations to multi-location and multi-organizational networks, extending the reach and speed of digital pathology applications.
